## **DETAILED ACTION**

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 4/17/06 has been entered.

Claims 1, 4-15, and 22.

## Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1, 4-15 and 22 are rejected under 35 U.S.C. 112, first paragraph, because the specification, while being enabling for bovine lactoferrin and fluconazole for the treatment of *Candida* does not reasonably provide enablement for a medicament for treatment and/or preventment of infections and/ or inflammation caused by Candida species, selected from the group of polypeptides listed in claim 1. The specification does not enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to use the invention commensurate in scope with these claims.

In this regard, the application disclosure and claims have been compared per the factors

indicated in the decision In re Wands, 8 USPQ2d 1400 (Fed. Cir., 1988) as to undue experimentation. The factors include:

- 1) the nature of the invention;
- 2) the breadth of the claims;
- 3) the predictability or unpredictability of the art
- 4) the amount of direction or guidance presented;
- 5) the presence or absence of working examples;
- 6) the quantity of experimentation necessary;
- 7) the state of the prior art; and,
- 8) the relative skill of those skilled in the art;

Each factor is addressed below on the basis of comparison of the disclosure, the claims and the state of the prior art in the assessment of undue experimentation.

The claimed invention is drawn to a medicament for treatment and/or prevention of infections and/or inflammation caused by Candida species, said medicament comprising an active amount of a polycationic peptide or protein, and a buffer for maintaining the pH of treatable tissue within a preselected range.

The breadth of the claims is excessive with regard to claiming medicament for treatment and/or preventment of infections caused by Candida species, said medicament comprising an active amount of a polycationic peptide or protein, and a buffer for maintaining the pH of treatable tissue within a preselected range. Applicant has only provided guidance for the use of bovine lactoferrin and fluconazole for the treatment of Candida. Applicant have provided no guidance of any other medicament for treatment and/or preventment of infections caused by Candida species, said medicament comprising an active amount of a polycationic peptide or protein, and a buffer for maintaining the pH of treatable tissue within a preselected range.

Application/Control Number: 09/720,278

Art Unit: 1654

In absence of evidence to the contrary, it would not be expected that any and all polycationic peptides or proteins would act as a medicinal agent. Furthermore, it would not be predictable to the artisan which polycationic peptides or proteins would work in the present invention, nor would it be predictable to the artisan which pathologies could be treated with these polycationic peptides or proteins.

In consideration of these factors, it is apparent that there is undue experimentation because of a variability in prediction of outcome that is not addressed by the present application. Absent factual data to the contrary, the amount and level of experimentation needed is undue to practice the invention as claimed.

## Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 3, 6, 7, 10, 12-14 and 22 are rejected under 35 U.S.C. 103(a) as being unpatentable over Wakabayashi et al (Antimicrobial agents and chemotherapy, 1998, vol. 42, no. 7, pp.-1587-1591) in view of Steinberg (WO 97/18827).

The claimed invention is drawn to a medicament for treatment and/or preventment of

Application/Control Number: 09/720,278 Page 5

Art Unit: 1654

infections caused by Candida species, said medicament comprising an active amount of a polycationic peptide or protein, and a buffer for maintaining the pH of treatable tissue within a preselected range.

Wakabayashi beneficially teaches the effects of bovine lactoferrin (LF) coupled with fluconazole to inhibit hyphal growth of *Candida albicans* (see, e.g., for example, abstract, pp-1587 and pp-1589-1590). Wakabayashi does not teach a buffer for maintaining the pH of treatable tissue within a preselected range.

Steinberg beneficially teaches compositions suitable for treating oral mucositis with antimicrobial peptides comprising a polycationic peptide (lactoferrin) and a buffer which discloses a final pH value of 7.0-7.2 (see, e.g., for example, page 5, lines 23-34, page 26, lines 9-10, page 37, lines 8-22, page 38, lines 18-22, and page 62, claim 1).

It would have been *prima facie* obvious to one of ordinary skill in the art at the time the claimed invention was made to have combined the teaching of Wakabayashi effects of bovine lactoferrin (LF) coupled with fluconazole inhibit hyphal growth of *candida albicans* with the beneficial teachings of Steinberg, because Wakabayashi discloses the therapeutic effects of lactoferrin related compounds against candidiasis due to *C. albicans* are now being assessed.

## Conclusion

All claims are rejected.

Art Unit: 1654

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Roy Teller whose telephone number is 571-272-0971. The examiner can normally be reached on Monday-Friday from 5:30 am to 2:00 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Bruce Campell, can be reached on 571-272-0974. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
